No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                9
                                     This sequence represents Thermomyces lanuginosus TL-gamma, a novel APT-dependent, plus and-directed microtubule motor protein that is a member of the unc-104 family and kinesin superfamily. The invention provides TL-gamma nucleic acids (see X87655), proteins and antibodies, and methods of screening for TL-gamma andulators potentially useful for treating hyphal fungal infections and diseases caused by mutated TL-gamma, e.g. neurodegeneration involving anterograde axonal transport, such as Alzheimer's, Parkinson's or Huntington's diseases or amyotrophic lateral hyphal and non-hyphal fungal infections.

The present invention describes the coding and protein sequences of the human kinesin-like protein HKLD. It is thought that the protein could be involved in neurological disorders, infertility, spontaneous abortion, neonatal chromosome disorders, aneuploidy and cancers. This is due to its function in the movement of microtubules. The protein shows homology to the mutine KIFIA and KIFIB proteins. The sequences disclosed in the invention can be used in the isolation of similar human proteins and in vector production. In addition, the biallelic markers shown can be used in disease diagnosis and population studies.

This invention describes a novel human kinesin-like motor protein

(Kinkp) (1) which has optostatic, anti-ulcerative, immunomedulatory,
anti-parkinsonian, anti-Albetic, anti-ulcerative, immunomedulatory,
anti-inflammacroy, anti-Albe, anti-hemmente and antiarthic activity.

(I) and the protein it encodes may be used in the prevention, treatment
and diagnosis of diseases associated with inappropriate expression
such as cancers, neurological disorders and disorders of vesicular

(I) impospotic for example, (1) (and vectors containing (1) (1v)) and the
KINNP polypeptide may be used to treat disorders of vesicular

(A) impospotic for example, (1) (and scancers (e.g. imphoma, melanoma and
cancers of the breast lung and prostately, neurological disorders of
vestoular transport (e.g. disbetes and parkinson's disease), disorders of
vestoular transport (e.g. diabetes and some immune/inflammaroup diseases

C) vestoular transport (e.g. diabetes and some immune/inflammaroup diseases

C) cacquired immune deficiency syndrome AIDS), rheumaroid arthritis and toxic

shock syndrome. This sequence represents the human KLIMP protein
                                                                                                                 Nucleic acid sequences encoding a human kinesin-like motor protein (KINP) useful for the traement of diseases associated with imappropriate KINPM expression such as cancers, neurological disorders and disorders of vesicular transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       64 FDRSYWSFDKNA-PNYARQEDLFQDLGVPLLDNAFKGYNNCIFAYGQTGSGKSYSMMGYG 122

                                                                                                                                                                              The Ki9 polypeptide comprises a number of repeated units (described in R7366). Detection of antibodies directed against this repeated unit in a patients asmple is indicative of laishmaniasis. The artigenic repeat unit can itself be used as a vaccine to protect against infection by a leishmania parasite.

Portions of LoFO (142164) contg. at least the 17 C-terminal amino acids (142165) have been found to generate a signal in an BILSA that is equivalent to that generated by the full length LoFO. A combination an oblypeptide may also be used, comprising an LoFO epitope along with an epitope derived from the Leishmania K39 antigen (142166), prefithe K39 repeat unit antigen having the sequence given in W03690. New Leishmania acidic ribosomal P-protein family poly;peptide - used to develop prode. for diagnosis, detection and protection against Leishmania infections 13 vkvsvrvrplnerennapegtkvtvaakqaaavvtvkvlggsnnsgaaesmgtarrvaqd 72 IKVVVRVRPFNARE--IDRGAKCIVRMEGNQTILTPP-----PGAEEKARKSGKTIMD 57 gkrkkgvkgggeevyvdvrehpsrgvfleggrlvevgslddvvrlieigngvrhtastkm Indels 230; Length 955; Ouery Match 20.2%; Score 814; DB 17; Best Local Similarity 28.1%; Pred. The protein has at lest, one of plus end directed mirrotubule motor activity. Afrasa (adenosiae triphosphatasa) activity and mirrotubule binding activity. CBNP-E is the motor that powers chromosome movement toward mirrotubule plus ends and is essential for congression

CENP-E is also a diagnosic marker for dividing cells, including
of curonoscumes during mitosis. Modulators of CEMP-E can thus control coal proliferation. Agents that modulate CEMP-E activity are lead therapeutic, bioagricultural and diagnostic agents. e.g. for treatment of unwanted cell proliferation (typical of many examples are tumors and mecasicases; vasoular malfunction; inflammatory and immune diseases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              121 YGKEHGVIPRICQDMFRRINELQKDKNLTCTVEVSYLEIYNERVRDLL-NPSTKGNLKVR 179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |:||: |::|: | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| | |::| |::| | |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::| |::|

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A method has been developed of separating a selected molecule from a maxture of molecules. The method comprises: (a) a separation device comprising a loading reservoir and a receiving reservoir coupled by a channel with microtubles immobilised on its surface and aligned parallel to a longitudinal axis of the channel. (b) loading the loading reservoir with an aqueous solution of the mixture of molecules; (c) adding a motorilism composition and APP to the solution, where the motorilism a mortochales, and moving in the presence of Ataching to the immobilised comprises, (i) a processive motor capable of ataching to the immobilised comprises, and moving in the presence of Ataching to the immobilised comprises, and moving in the presence of Ataching to the immobilised comprises, and moving in the presence of Ataching to the immobilised conservation and the motor protein attaches to the immobilised is capable of binding the selected molecule, so that the ligand binds is especial and the motor protein attaches to the immobilised microtubules and transports the bound selected molecule from the receiving reservoir. The method and the system are used for the receiving reservoir. The method and the system are used for the receiving reservoir. The mothod and the system are used for the presence of the specific binding ligands. Activation of these enables them to travel the specific binding ligands. Activation of these enables them to travel then be removed easily without contaminants of other mixture particles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Separation of selected molecules, e.g. DNA, from complex mixtures - uses specific apparatus to allow the selected molecule to bind to moro proteins, and be actively transported and separated away along motor proteins.

A method has been developed of separating a selected molecule from a mixture of more and aligned perallel comprising a loading reservoir coupled by a channel with mixtorbubles immobilised on its surface and aligned parallel to to a longitudinal axis of the channel. (b) loading the loading reservoir comprises, (i) a processive motor capable of attaching to the immobilised microtubles, and moving in the presence of APP as source of chemical comprises, (i) a processive motor capable of attaching to the immobilised microtubles, and moving in the presence of APP as source of chemical concruptions, and moving the presence of APP as source of chemical mixture parallel concruptions and (ii) a lighted to the motor protein, where the light of is capable of binding the selected molecules so that the light of the creetying reservoir; and (i) removing the selected molecules along the receiving reservoir; and (i) removing the selected molecules along the separation of specific molecules from complex mixtures. The molecule to the presence of the specific binding lighted, and complex mixture persence of the presence of cown a preformed channel in a specially made piece of apparatus. They can then be removed easily without contaminants of other mixture particles.
